

JAIKANTH R

Cloud & Blockchain Systems Engineer · AI Orchestration · Zero-Trust Security
jaikanthr01@gmail.com | linkedin.com/in/jaikanthr01 | [GitHub](#) | [Portfolio](#) | Chennai, Tamil Nadu

PROFESSIONAL SUMMARY

MTech candidate at SRMIST specialising in Cloud Native Security, Hyperledger Fabric Architecture, and Autonomous AI Agent Orchestration. Building Zero-Trust infrastructure where AI model integrity is cryptographically anchored to decentralised ledgers. Hands-on with Kubernetes/AWS deployments, MCP-based multi-agent pipelines, and blockchain chaincode development.

TECHNICAL SKILLS

Languages: Python · TypeScript · Java · JavaScript · Golang · Solidity · Rust · Vyper · Bash · SQL
Cloud & DevOps: AWS (EKS / ECS / Lambda) · Kubernetes · Docker · Terraform · GitHub Actions · CI/CD Pipelines
Blockchain: Hyperledger Fabric · Chaincode (Java/Go) · Fabric CA · Smart Contracts · Ethereum · Solana · IPFS
AI & Agents: MCP (Model Context Protocol) · Multi-Agent Orchestration · Supervisor/Worker Coordination · Agentic AI
Security: Zero-Trust Architecture · Penetration Testing · Cryptographic Anchoring · Automated Threat Detection
APIs & Tooling: REST · gRPC · GraphQL · Postman · Next.js · GSON · Git · Linux

PROJECTS

Model Integrity Ledger (AI-Audit) | Lead Blockchain Developer

Stack: Hyperledger Fabric · Java · Docker · Next.js · GSON · Bash

- Accomplished decentralised model governance by architecting a multi-organisation Hyperledger Fabric network using Docker and Fabric CA, achieving a 100% reduction in unauthorised model-swapping vulnerabilities.
- Engineered immutable audit trails by developing high-performance Java chaincode for cryptographic hash storage, achieving sub-second latency for auditModel transactions across the peer network.
- Optimised data transparency by implementing complex state-retrieval logic and GSON serialisation, enabling real-time provenance tracking and 30% faster audit-log visualisation in a Next.js dashboard.
- Streamlined verification workflows by scripting automated Bash deployment pipelines for chaincode lifecycle management, reducing manual environment setup time by 40% for new network peers.
- Validated model integrity by creating a Source-of-Truth ledger for AI weights, successfully identifying and flagging 100% of simulated model-drift incidents during stress testing.

Sovereign Audit Agent | Lead Systems Architect

Stack: Python · MCP · Hyperledger Fabric · AWS EKS · Kubernetes · TypeScript

- Designed a production-grade MCP server exposing Hyperledger Fabric blockchain state as structured tool endpoints consumable by LLM-based agents, enabling natural-language blockchain querying.
- Implemented Supervisor/Worker multi-agent coordination pattern in Python, where a planning agent delegates audit sub-tasks to specialised worker agents — reducing manual audit query time by 60%.
- Integrated cryptographic proof verification into the agent pipeline so every query response is accompanied by a Fabric-signed provenance receipt, ensuring tamper-evident audit outputs.
- Deployed the full stack on AWS EKS with Kubernetes-managed peer nodes, achieving 99.8% uptime across simulated load tests with 200+ concurrent agent requests.

EDUCATION

Master of Technology — Cloud Computing & Blockchain Technology

SRMIST, Kattankulathur, Chennai CGPA: 7.74

Jul 2025 – May 2027

Bachelor of Engineering — Computer Science

Valliammai Engineering College, Chennai

Jul 2022 – May 2025

CGPA: 7.8

Higher National Diploma — Computer Engineering

Dhanalakshmi Srinivasan Engineering College

Aug 2020 – May 2022

86%

CERTIFICATIONS
